

From Davide Sgalaberna
(ETH Zurich, Switzerland)

It is a pleasure to work together with him on the SuperFGD detector project.

Yury is a point of reference in the T2K experiment.
One thing that has particularly impressed me about Yury is that he works very hard to make things happening.

I want to share one anecdote:

The first time we discussed the SuperFGD detector was at a collaboration meeting in Japan. People were skeptical about that it because it seemed to be hard to make. And it is ! Anyhow, Yury was not discouraged by the possible difficulties and the day after when I met him he said:

“Hello Davide, I have photos of the cubes we discussed yesterday”

I thought he was joking and instead we had the very first little prototype. That was the start of the SuperFGD project and now, 4 years after that day, we are building it !

★ HAPPY ★
BIRTHDAY!
